vCoD

## VIRTUAL CLASS ON DEMAND

Online training sessions and lectures using multimedia and communication technologies

How **vCoD** works

Presenter — **Event** — **Chat** — **Participants**

The Presenter starts an event, while Participants join the event by using the web interface of **vCoD** in the **virtual classroom**.

Participants are „present" in the virtual classroom, once they joined the actual event. The video-based lecture is accompanied by a **Chat room**, which is enabling real time and interactive communication between the Trainer and the Participants.

Modules of **vCoD**

Video lecture

Real time audiovisual broadcasting of the event, which can be followed by using a internal or external network device, or can be later viewed in an offline mode, as a recorded event.

Chat

Provides real time and interactive communication between Trainer and Participants. The Chat room is open for the full duration of the lecture.
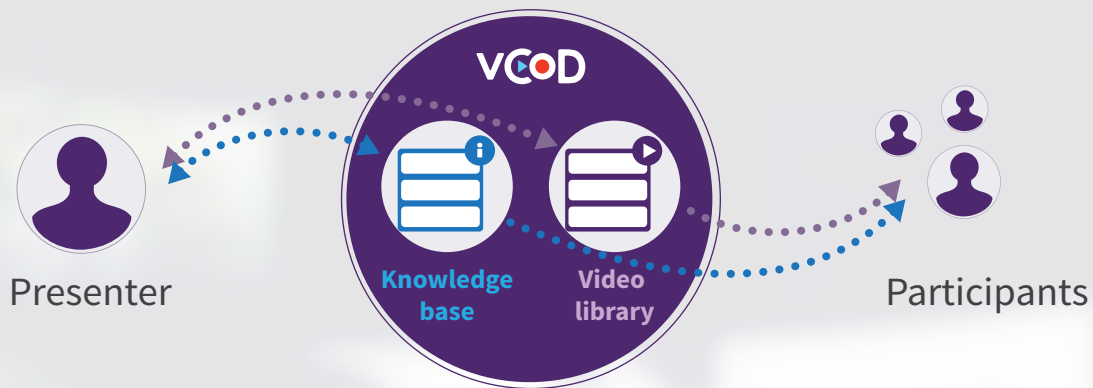

Knowledge base

Stores content related to the lecture. It can be accessed any time and enhances efficiency of knowledge management within the organisation.

Video library

Stores the video recordings of previous events. Elements in video library can be viewed and used any time.

Knowledge base and Video library

Presenter — Knowledge base — Video library — **Participants**

The **vCoD Knowledge Base** is created by the content providers of the system. Materials related to the actual topic can be found here. These content materials can support both lecturers and participants to prepare for the session.

Multimedia content, images, external references or other knowledge base content within vCoD can be inserted into knowledge base elements.

Video library contains video recordings of previous lectures. These recordings can be accessed any time or re-usable for other lectures, saving the direct participation of a lecturer.

Supports

INTERNAL TRAINING WITHIN THE ORGANISATION
ICT TRAINING MEDICAL TRAINING SAFETY AND HEALTH (ACCIDENT PREVENTION) TRAINING
FIRST AID RISK MANAGEMENT IN SPECIAL WORKING CONDITIONS
MATERIALS RELATED TO THE CONTENT OF LECTURE
KNOWLEDGE BASE ISO DOCUMENTS WITH VERSION MANAGEMENT
MEDICAL TRAINING
